

— THE 10-MONTH FLAGSHIP

From zero to DevOps Engineer in 10 months.

4 months of DevOps Engineer training, followed by a 6-month project-based training phase — mentored by experienced working engineers. Six real production projects. Built by working engineers, not full-time trainers.

— THE PROGRAM **Two phases. One outcome.**

PHASE 01

4 months

DevOps Engineer Training

Linux · Docker · AWS · CI/CD · Terraform.
Classroom-led with hands-on labs. Online,
Hybrid, or Offline.

PHASE 02

6 months

6-Project Training Phase

Six production projects mentored by working
DevOps & cloud engineers, on Techcake's
Taliparamba, Kannur campus.

- 01

Production Linux Infrastructure

WK 1-4

Deploy and harden a multi-server Linux stack — Nginx/Apache, MySQL, SSH hardening, firewalls, user mgmt, log monitoring — wired together as a production-realistic environment.
- 02

Containerized Application Stack

WK 5-8

Migrate the Project 1 stack into Docker. Compose orchestration, a private registry, container health checks, and structured logging. Same app, now portable and reproducible.
- 03

CI/CD Pipeline

WK 9-12

Build a complete CI/CD pipeline using Git plus Jenkins or GitHub Actions. Automated test and deploy of the Project 2 application, with build artifacts, deployment strategies, and rollback procedures.
- 04

AWS Cloud Migration

WK 13-16

Migrate Project 3 to AWS — production-grade architecture spanning EC2, VPC, RDS, S3, IAM, CloudWatch, and ALB. The moment your work starts looking like what real AWS jobs require.
- 05

Kubernetes Production Deployment

WK 17-21

Containerize and deploy on AWS EKS. Helm charts, ingress controllers, secrets management, horizontal pod autoscaling, and observability basics — the K8s knowledge senior interviewers look for.
- 06

Infrastructure as Code + Observability

WK 22-25

Refactor Project 5 entirely as Terraform code. Add Prometheus and Grafana for metrics, ELK or Loki for logging, and proper alerting. The capstone deliverable.

— HOW TO APPLY

1

Reserve your seat

Online at techcake.in/hello — takes a minute.

2

Counsellor call

A free call to check fit and answer questions.

3

Admission conversation

Fees, monthly payment options and any current intake offer.

4

Enroll

Confirm your seat and get started.

Fees aren't published here — we walk you through the program fee and monthly payment options on the free call.

Ten months from now.

You're a DevOps engineer.

— WHAT OUR STUDENTS SAY

Student Reviews.

★★★★★ 4.7 / 5 · 205 Google reviews

"I did not expect such a high-quality DevOps internship experience in Taliparamba. The course was very well organized — each module arranged step-by-step, from the basics to advanced DevOps and cloud concepts. I appreciate the initiative the Techcake team takes to provide such industry-relevant training."

Charles Benny DEVOPS INTERNSHIP

★★★★★

**Seetha Lakshmi K A P**DEVOPS ENGINEER
TRAINING

★★★★★

Completed DevOps Engineer training and placed at **Saints & Masters Pvt Ltd** as a DevOps Engineer Trainee.

Udith PK
4 MONTHS AGO

It was a great experience. The class was really helpful.

Vismaya C V
3 MONTHS AGO

Very nice class and a good experience. We learned something new about Linux & AWS projects.

Arjun Uthaman
4 MONTHS AGO

Good class and very informative session.

Kezia Mariam Roy
VAPT INTERNSHIP

The internship was great in VAPT — Ashwin was a great mentor throughout.

Vismaya K
3 MONTHS AGO

Great class, and good support for doubts and interview preparation. I highly recommend Techcake for anyone who wants to build a career in DevOps and AWS — helpful for beginners.

Muhammed Shameel
LOCAL GUIDE · 6 MO AGO

Best class of cyber security and everything. The classes are very helpful — helped us find our interest after graduation.

Sanjay PV
11 MONTHS AGO

It was a nice experience to participate in the bootcamp conducted, and I could understand every topic clearly.

Smera M.M
CYBERSECURITY INTERNSHIP

Great learning experience with Techcake. Special thanks to Ashwin for his valuable guidance, support and mentorship throughout the internship.

Rohith P
4 MONTHS AGO

It was a great experience. The class was really helpful. It was short but was worth it.

Akshay Sukumaran
5 MONTHS AGO

The bootcamp was excellent. Had a basic exposure to DevOps and cloud.

Riya Krishna
3 MONTHS AGO

It's been a great class for me. I learnt new things in computer.

Haseeb
DEVOPS INTERNSHIP

Great experience with quality internships and bootcamp at Techcake.

Jobit Rahul
1 MONTH AGO

Wonderful bootcamp, I really love it. Everything understood properly. Thank you so much.

Sarang P
4 MONTHS AGO

It was a good experience, the classes were helpful.

Ashfah Ashraf
LOCAL GUIDE · 10 MO AGO

I attended the DevOps Bootcamp by Techcake and it was a really good experience. The sessions were clear, and the hands-on projects helped me understand how DevOps works in real.

Abel Santhosh
6 MONTHS AGO

Techcake Taliparamba provides excellent training in Linux, AWS, and DevOps with a strong practical approach. The trainers are experienced, friendly, and explain concepts clearly.

Arjun P Reji
2 WEEKS AGO

Great experience, the trainer explains everything very well.

Sayandhana K
3 MONTHS AGO

It's been a great class for me. I learnt about installing new programs.

Jeslin Jestine
5 MONTHS AGO

It was a great experience. The class was really helpful. It was short but was worth it.
